

Basic data of the subject	
Academic unit:	Faculty of Engineering and Informatics Applied Informatics
Title of the subject:	Mathematics
Level:	Bachelor
Course Status:	Obligatory
Year of studies:	I
Number of hours per week:	3
Value of Credits - ECTS:	5
Time / location:	
Course lecturer:	Prof.Ass.Dr.Valdete Loku
Contact details:	Valdete.loku@ushaf.net
Course Description:	<i>The subject in mathematics analyzes the meaning of community and relation, logical mathematics, mathematical induction, linear algebra: Matrices and determinants. Systems of linear equations and their solution. Understanding the function, some data about the function. Numeric string. String and function limit. Continuity of function. Derivative of the function. Review and graphical presentation of the function. Integral computation methods (substitution method and partial integration). Applications of integrals. Upon completion of the course, students perceive the essence of the practical application of complex mathematical methods.</i>
Objectives of the course:	<i>The aim of the course is to systematize the knowledge of mathematics acquired in school, to acquaint students with the terminology of linear algebra and mathematical analysis, knowledge on the meaning of numbers, logical mathematics, mathematical induction, function, sequence, derivative of function, integral, which find application in both mathematical disciplines and computer science, etc.</i>
Expected learning outcomes:	<p><i>Upon successful completion of this course, student will be able to:</i></p> <ul style="list-style-type: none"> • <i>Apply theoretical knowledge and to demonstrate the understanding and application of mathematical concepts in order to solve problems in different situations, including the real-life context.</i> • <i>Solve problems by applying logical mathematics, mathematical induction, matrices and determinants.</i> • <i>Analyze the solution and application of systems of non-homogeneous and homogeneous linear equations with many unknowns and with many equations.</i> • <i>Acquires the meaning of the function, the meaning of the numeric string, the arithmetic and geometric string, the limit of the string and the function. Continuity of function.</i>

	<ul style="list-style-type: none"> • To master the derivative of the function, the application of the derivative of the function for various problems as well as the review and graphical presentation of the function. • To acquire the meaning of the indefinite integral, the methods of calculating integrals (substitution method and partial integration) as well as the applications of integrals. 		
Contribution to the student load (which must correspond with learning outcomes)			
Activity	Hour	Day/Week	In total
Lectures with numerical exercises	3	15	45
Internship			
Contacts with teacher / consultations			
Field exercises			
Midterm, seminars and projects.	3	2	6
Homework			
Self-learning time student (at the library or at home)	3	15	45
Final preparation for the exam	7	2	14
Time spent on evaluation (tests, quiz and final exam)			
Projects and presentations.	3	5	15
Total			125
Teaching methodology:	<p><i>The course takes 15 weeks with 2 hours of lectures and 2 hour weekly individual and group exercises.</i></p> <p><i>Exercises will be held in the form of individual and group work in which concrete examples will be discussed.</i></p> <p><i>Active participation is extremely important so students are encouraged to attend lectures and exercises regularly and contribute to the discussions that take place in lectures.</i></p> <p><i>Lectures, exercise, individual work, discussions and group work.</i></p>		
Assessment methods:	<p><i>Within the semester, it is planned to organize two periodic tests from lectures and exercises with 45 points each (assignment - open/alternative questions), or the student has the right to undergo only the final exam which has 90 points (test from the part of exercises and lectures) , the test contains tasks and open/alternative questions,</i></p> <p><i>The student passes the exam if he collects 50 points from all evaluation criteria,</i></p> <p><i>10 points - activity and attendance in lectures and exercises,</i></p> <p><i>90 points – from two Periodic Tests from lectures and exercises, or Final Exam.</i></p>		
The ratio of theory and	<i>100% Theory with numerical exercises.</i>		

practice:	
Literature	
Basic Literature:	<ol style="list-style-type: none"> 1. <i>Ejup Hamiti: Matematika I dhe Matematika II për studentët e Inxhinierisë elektrike dhe kompjuterike (Prishtinë 2009)</i> 2. <i>Mr.Sc.S.Sadiku&F.Merovci: Matematika I, Përmbledhje detyrash të zgjidhura. Prishtine 2008</i>
Additional Literature:	<ol style="list-style-type: none"> 1. <i>Prof. Dr. Sadri Shkodra, Matematika I. Prishtine 2004</i> 2. <i>Prof. Dr. Sadri Shkodra, Matematika II. Prishtine 2004</i>
Designed learning plan	
Week:	Lectures and exercises to be held
Week one:	<i>Communities and relationships</i>
Week two:	<i>Algebraic expressions.</i>
Week three:	<i>Logical mathematics</i>
Week four:	<i>Mathematic induction. Binomial formula.</i>
Week five:	<i>Matrices and determinants</i> <i>Understanding the matrix, types of matrices.</i> <i>Addition, subtraction and multiplication of matrices.</i> <i>Inverse matrix.</i> <i>Elementary matrix transformations.</i> <i>Matrix rank.</i> <i>Definition and calculation of the determinant.</i>
Week six:	<i>Systems of linear equations.</i> <i>Systems of linear equations and their solution by different methods.</i> <i>Discussion and solution of systems of linear equations depending on the real parameter.</i>
Week seven:	<i>Test 1</i>
Week eight:	<i>Function.</i> <i>Meaning, some data and types of functions.</i>
Week nine:	<i>Verses. String and function limit.</i>
Week ten:	<i>Derivative of the function. Continuity of function.</i>
Week eleven:	<i>Review and graphical presentation of the function.</i>
Week twelve:	<i>Indefinite integral</i>
Week thirteen:	<i>Definite integral.</i>
Week fourteen:	<i>Methods for calculating integrals (method of replacement and partial integration). Applications of integrals.</i>
Week fifteen:	<i>Test 2</i>
Academic policies and rules of conduct	
<i>Regular attendance of lectures and exercises is necessary, as well as active participation with discussion and solution of tasks. Not impeding the progress required for learning using mobile phones turned off or in silent mode.</i>
