Basic data of the subject				
University:	University of Applied Sciences in Ferizaj			
Academic unit:	Faculty of Engineering and Informatics			
Program:	Applied Inf	ormatics		
Title of the subject:	Programming			
Level:	Bachelor			
Course Status:	Obligatory			
Year of studies:	I, Semester I			
Number of hours per week:	3			
Value of Credits - ECTS:	5			
Time / location:				
Course lecturer:				
Contact details:			_	
Course Description:	This course w	will introduce	students to the basi	ics of programming
_	and algorith	hms. It enab	oles students to ap	oply programming
	techniques to	o new softwa	re projects. Also, t	his course enables
	students to s	uccessfully tr	ain and apply prog	ramming and using
	pseudo-code	s to solve v	arious problems a	nd switch them to
	programmin			
Objectives of the course:	The aim of t	the course is	to provide a deep	understanding and
			nderstand and appl	
			lgorithms in the	
			his course aims to μ	-
			and develop compu	
			and algorithms in	n an efficient and
	effective way			
Expected learning outcomes:	v A	0	rse (subject) the stud	lent will be able to:
	• Analyze and solve the problem			
	 Use c # programming language to solve the problem How to read and "debug" the program in c # 			
	• <i>C</i> # programming language syntax			
	• Develop algorithms and programs in c # programming language for other course requirements during study and			
	beyon		-	- •
Prerequisites:	It is preferre	d that the stu	dent has basic know	vledge of
	computers a	nd programm	ing logic	
Contribution to the stude	ent load (whic	h must corro	espond with learning	ng outcomes)

Teaching methodology:	Lectures and exercises combined with case studies and			
	classroom discussions			
Assessment methods:	 The student can choose to be assessed one of the two forms of assessment, given below: 1. Form 1: Evaluation with colloquiums and project 2. Form 2: Evaluation with the final exam. 			
	Form 1:			
	In the first form of assessment "Assessment with colloquiums and project" the student is assessed in four activities that are carried out during the lectures: 1. Colloquium 1 (35%), individual assessment			
	2. Colloquium 2 (35%), individual assessment			
	3. Class activity (10%), individual assessment			
	4. Project (20%), group assessment.			
	If the student is not satisfied with the assessment achieved			
	according to form 1, then he can undergo the assessment			
	according to form 2 to obtain a higher assessment.			
	<i>Form 2:</i>			
	Through the final exam, the student can achieve a maximum of 70% of the points from the total of 100 points.			
	The rest of the 20% points must be completed by group work in the Project, an activity carried out during the lectures.			
	In Colloquium 1, Colloquium 2 and the final exam, the evaluation of the students will be done through an evaluation form, which must be completed individually by the student. The evaluation form will contain 5 tasks through which the student's learning outcomes will be evaluated.			
	Activity in the class means the student's engagement in dealing with the issues discussed in the class, during the lectures.			
	Project (20%), group assessment: it is an activity in which students apply the acquired knowledge in a concrete project. It is carried out in groups of 3 or 4 students who are obliged to			

	<i>carry out the activity, document and present it to the subject professor.</i>		
	Rating:		
	91-100 points – graded 10 (ten)		
	81-90 points – graded 9 (nine) 71-80 points – grade 8 (eight) 61-70 points – grade 7 (seven) 51-60 points – grade 6 (six)		
	0-50 points – The student repeats the exam		
The ratio of theory and practice:	70% theory and exercises with 30% lab work.		
Literature			
Basic Literature:	1. Fundamentals of Computer Programming with C#: The Bulgarian C# Book, Nakov Svetlin, and Veselin Kolev 2013.		
	2. Dika A.: Bazat e programimit në C++; Prishtinë; 2005; ISBN: 9951-00-039-8		
Additional Literature:	3. Troelsen, A., & Japikse, P. (2017). Pro C# 7: With. NET and. NET Core. Apress.		
	4. Online Book: https://introprogramming.info/english-		
	intro-csharp- book/		
Designed learning plan			
Week:	Lectures and exercises to be held		
Week: Week one:	Introduction to C # Programming Language:		
Week one:	Introduction to C # Programming Language: How to write, compile, and execute code in C #		
	Introduction to C # Programming Language: How to write, compile, and execute code in C # Program structure:		
Week one: Week two:	Introduction to C # Programming Language: How to write, compile, and execute code in C # Program structure: Variables and Constants, Data types

Week nine:	Methods (functions):
	Method Definition.
	The main method (main). Ordinary methods.
	Calling method.
Week ten:	Types of methods (functions):
	Local and global variables. Parameters of methods.
	<i>Types of methods based on return values. Overloaded methods.</i>
	Implementation of math class methods. Factoring and solving.
Week eleven:	Vectors:
	Determination of vectors. Arithmetic operations. Return string
	from method.
	Individual student practical work on the computer writing the
	program in the c # programming language for different
	calculations of vector arithmetic operations. Solving some
	examples.
Week twelve:	Vectors:
	Searching for arrays. Enumeration of designated members. Finding Designated Members. Sorting of strings. Individual student work. Individual student practical work on the computer by writing the program in the c # programming language for
TT 7 T / T /	different vector computations. Solving some examples.
Week thirteen:	Matrices:
	<i>Elementary matrices. Determining matrices. Arithmetic operations. Individual student practical work on the computer by writing the program in the c # programming language for</i>
	different calculations of arithmetic operations with matrices.
	Solving some examples.
Week fourteen:	Study visits to a company
Week fifteen:	Second evaluation
